

Apical aneurism and myocardial bridging in a patient with hypertrophic cardiomyopathy: Association or consequence of the myocardial bridging?

Submitted by Emmanuel Lemoine on Tue, 12/16/2014 - 10:54

Titre	Apical aneurism and myocardial bridging in a patient with hypertrophic cardiomyopathy: Association or consequence of the myocardial bridging?
Type de publication	Article de revue
Auteur	Foucault, Anthony [1], Hilpert, Loic [2], Hédoire, Francois [3], Saloux, Eric [4], Gomes, Sophie [5], Pellissier, Arnaud [6], Scanu, Patrice [7], Champ-Rigot, Laure [8], Milliez, Paul [9]
Editeur	Via Medica
Type	Article scientifique dans une revue à comité de lecture
Année	2012
Langue	Anglais
Date	2012
Numéro	6
Pagination	643 - 645
Volume	19
Titre de la revue	Cardiology journal
Résumé en anglais	<p>The identification of high-risk patients with hypertrophic cardiomyopathy (HC) for primary prevention of sudden cardiac death (SCD) remains a challenging issue, since major risk factors sometimes lack specificity. We report the case of a patient with HC and association of apical aneurysm and myocardial bridging who had been initially not implanted because she had only one major risk factor. She subsequently experienced a sustained ventricular tachycardia that finally motivated the implantation. We conclude that it is never an easy decision to implant a preventive implantable cardioverter-defibrillator (ICD). Nevertheless, additional criteria for a better selection of patients who would benefit from an ICD implant are certainly useful.</p>
